

THE FREE PLANET MANIFESTO

Passion, creativity and kinship are the three guiding principles of life on Free Planet but more specific suggestions might go along these lines:

Crime

if there is nothing to steal, nothing to accumulate, there's no need for crime. The prisons can be shut down and everyone can help rebuild Free Planet so that it supports as much life as it wants, by arrangement of an educated race. There will be no centralised (nor global) governance nor surveillance state.

Culture

we should aim to encourage cultural diversity. Moral issues should be dealt with at the civic (local) level. If you live in a culture you must embed yourself in it, live like them. Everything is permitted on Free Planet - science should be our friend.

Defense

on a Free Planet, it makes no sense to plan for, and equip 'our enemies' with the weapons they'll need for us to blow them to smithereens. Come on, grow up.

Economy

there is no longer a Corporate War Game running on Free Planet, that's not what we're here for. We have realised we are not slaves and we will no longer tolerate your penny-stolen castles in the sky. We all benefit from a cleansed planet.

Education

tell them the truth, they need to know how beautiful Free Planet is and how they can contribute towards its rejuvenation (look it up). Don't pussy foot around the issues as *political education* does today. Let the children dream, dogma is of no use. And don't distract them with their corporate role, their make-believe *android* status.

Energy and the Environment

liberate science from the military leash and equip the world with the most ethical (i.e.

least polluting) source of Free Energy - there is a lot of research in this area in private government.

Food and Rewilding

ethical food (and water) and a return to a more vegan lifestyle will help the planet restock. Using science is allowed, ethically.

Foreign Affairs and International Trade

it's a round world, last time I looked - Free Planet means just that, no more trade, no more boundaries to creativity. The fun will return to this world.

Health

as energy is free, ethical food and water is free, so is health care - but it will focus more on PREVENTION rather than drugging and chopping and blasting with nuclear radiation and poisons. Big Pharma has gone too far and we need to return to the source of WHY we get ill.

Housing and Planning

despite the global ownership models that are currently in place, this is a very unstable world upon which we live. Floods, earthquakes, fire storms, asteroids, solar storms are all part of the activity of our region of space. We must be able to react to these changes and this means investigating 'mobile housing' that will support such - aim to re-wild Free Planet with a push away from CITIES.

How We are Governed

You The People know, in your hearts, what's right and what's wrong. We will soon understand what's right and wrong for Free Planet - at that point, the whole of humanity will rejoice at its liberation from feudal slavery. We will be in control of our own destiny.

Immigration

we are all guests on this alien world, we should all be allowed to MOVE FREELY across

any border and live where we want to help Free Planet return to her original beauty.

Referendums

we all know what's best for Free Planet.

Tax

Free Planet doesn't need any funding.

Transport

automated travel modules will get us from point A to B and Free Planet-funded research into other exotic forms of long-haul transportation will open up the Solar System. A beautiful future lies ahead for the members of Free Planet.

PLEASE, SHARE THIS WITH AS MANY PEOPLE AS YOU KNOW, IN AS MANY COUNTRIES - THE TRUTH MUST COME OUT.
